Sudan

Sudan is a lower middle-income country and a least developed country (LDC) with a GNI of 2,380 USD per capita (2017) and a population of 41 million inhabitants (2017). In the 2018 Monitoring Round, Sudan reported on 354 million USD in development co-operation flows.

1. National development planning and results orientation

Overall quality of national results framework
High-quality, inclusive and results-oriented development strategies are critical for countries’ ownership over their development and the implementation of the 2030 Agenda and the Sustainable Development Goals (SDGs). The quality of national development planning in Sudan is medium (61%).

Extent of use of country-owned results frameworks by development partners
Development partner alignment to country-led development priorities is at the heart of country ownership. Global Partnership monitoring assesses whether interventions: draw objectives from national development strategies; draw indicators from country results frameworks; use government data and statistics for monitoring; and involve government in evaluations. The first three elements provide the official data to report on SDG indicator 17.15.1. In Sudan, development partners align to country priorities to a medium extent (66% - SDG indicator 17.15.1).

2. Multi-stakeholder engagement

Recognising that successful development efforts require the inclusive and equitable participation of all actors, the 2030 Agenda calls for collective action by the whole of society. Global Partnership monitoring examines the engagement of civil society and the private sector from both the perspective of the government and representatives of these stakeholder groups.

Quality of public-private dialogue
Government representatives perceive the quality of public-private dialogue as emerging, SMEs as weak, large private sector firms as emerging and trade unions as weak.
3. Quality and use of public financial management systems

Strengthening public financial management systems
Strong public financial management (PFM) systems are an essential element of good governance and vital to achieving development goals. Sudan did not assess progress in the quality of its PFM systems.

Development partners’ use of country systems
Development partners’ use of these systems to deliver co-operation both lowers transaction costs but also helps to accelerate their strengthening. In Sudan, use of country PFM systems increased from 4% in 2016 to 18% in 2018.

Further, legislative oversight of the budget has improved. The share of development co-operation recorded on budgets subject to parliamentary scrutiny increased from 0% in 2016 to 100% in 2018.

Systems to track and make public allocations for gender equality and women’s empowerment

Adequate and effective financing is essential to achieve gender equality and to empower all women and girls. Sudan has some elements of a system in place to track and make public allocations for gender equality and women’s empowerment, approaching the requirements of SDG indicator 5.c.1.

5. Mutual accountability mechanisms

Mutual accountability underpins the efforts of development actors to meet joint commitments, improve how they work together and increase their development effectiveness. Mutual accountability mechanisms are made up of multiple, reinforcing components that can help enhance transparency and accountability at country level. Global Partnership monitoring defines and assesses mutual accountability against five components. Sudan has five out of five components in place.

Component 1: Comprehensive policy framework for development co-operation
Component 2: Country-level targets for government and development partners
Component 3: Regular joint assessment of progress
Component 4: Assessments are inclusive and involve non-state actors
Component 5: Timely, publicly available results of assessments
