Seychelles

Seychelles is a high-income country and a Small Island Development State (SIDS) with a GNI of 14,170 USD per capita (2017) and a population of 96,000 inhabitants (2017). In the 2018 Monitoring Round, Seychelles reported on 16 million USD in development co-operation flows.

1. National development planning and results orientation

Overall quality of national results framework
High-quality, inclusive and results-oriented development strategies are critical for countries’ ownership over their development and the implementation of the 2030 Agenda and the Sustainable Development Goals (SDGs). The quality of national development planning in Seychelles is low (49%).

Extent of use of country-owned results frameworks by development partners
Development partner alignment to country-led development priorities is at the heart of country ownership. Global Partnership monitoring assesses whether interventions: draw objectives from national development strategies; draw indicators from country results frameworks; use government data and statistics for monitoring; and involve government in evaluations. The first three elements provide the official data to report on SDG indicator 17.15.1. In Seychelles, development partners align to country priorities to a high extent (84% - SDG indicator 17.15.1).

2. Multi-stakeholder engagement

Recognising that successful development efforts require the inclusive and equitable participation of all actors, the 2030 Agenda calls for collective action by the whole of society. Global Partnership monitoring examines the engagement of civil society and the private sector from both the perspective of the government and representatives of these stakeholder groups.

Quality of public-private dialogue
Government representatives perceive the quality of public-private dialogue as consolidating, large private sector firms as consolidating and trade unions as emerging.

Enabling environment for civil society organisations...
... was reported as moderate by government representatives, moderate by civil society organisations and moderate by development partners.
3. Quality and use of public financial management systems

**Strengthening public financial management systems**

Strong public financial management (PFM) systems are an essential element of good governance and vital to achieving development goals. Seychelles experienced significant progress in the quality of its PFM systems.

**Development partners’ use of country systems**

Development partners' use of these systems to deliver co-operation both lowers transaction costs but also helps to accelerate their strengthening. In Seychelles, use of country PFM systems was reported to be 28% in 2018.

**Systems to track and make public allocations for gender equality and women’s empowerment**

Adequate and effective financing is essential to achieve gender equality and to empower all women and girls. Seychelles has some elements of a system in place to track and make public allocations for gender equality and women’s empowerment, approaching the requirements of SDG indicator 5.c.1.

4. Predictability and forward planning

High-quality and timely information on development co-operation helps governments in planning and managing resources for results and can guide development partners in coordinating their support with other providers, as to avoid fragmentation and duplication of efforts. Annual predictability of development co-operation is high, with 94% of co-operation disbursed as scheduled. Medium-term predictability is medium, with 81% of co-operation available in forward-looking expenditure plans for the next three years.

**Predictability of development co-operation**

Disbursements as scheduled

**Systems to track development co-operation information in Seychelles**

100% of development partners report through one or more of these systems

5. Mutual accountability mechanisms

Mutual accountability underpins the efforts of development actors to meet joint commitments, improve how they work together and increase their development effectiveness. Mutual accountability mechanisms are made up of multiple, reinforcing components that can help enhance transparency and accountability at country level. Global Partnership monitoring defines and assesses mutual accountability against five components. Seychelles has two out of five components in place.

**Disclaimer:** This document was prepared based on data collected from voluntary reporting to the 2018 Monitoring Round of the Global Partnership for Effective Development Co-operation. The information provided does not necessarily represent the views of OECD, UNDP or the Government of Seychelles. For ease of reference, the term ‘country’ is used to refer to developing countries and territories that reported to the 2018 Monitoring Round. Participation in this process and mention of any participant in this document is without prejudice to the status or international recognition of a given country or territory.
